

Q. How do I add new image to the app and then add sound to that image?

A. You can follow the following steps to add a Visual Scene Display (VSD) to the app.

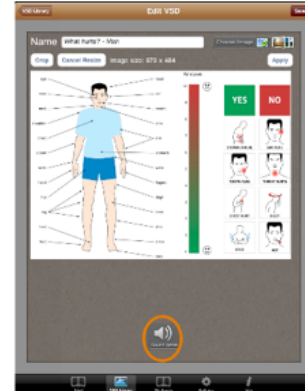

STEP 1: Within the "VSD Library" select the + in the top left corner.

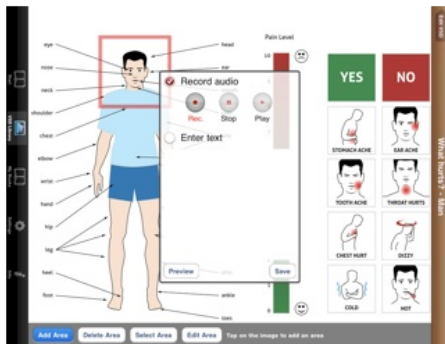

STEP 2: Select an image by choosing an image from the iPad's photo library or image search.

STEP 3: Once image is selected you then touch "Sound Areas" to add sound.

STEP 4: To add a sound area simply touch "Add Area" and Touch Screen. Then touch "Edit Area" to add sound by recording your voice or using TTS

STEP 5: To add multiple "sound areas" simply repeat STEP 4 as many times as you need to. To change the size or move sound area simply hold and drag to where you need or the size you want. When you are finished SAVE and return to the VSD library to see your image.
