

First Then HD – Images Sources

First Then HD has five different ways to obtain images for use within visual schedules. The following is a detailed explanation of these image sources.

Stock Images:

These are pre-loaded images within the app itself. This is also where you will find the images you have downloaded to the app using the “Download Package” feature. The images are listed in alphabetical order, and the built-in search feature enables easier navigation through the Stock Image library.

Image Library:

This is your device's image library (images taken by and/or stored on your device). If an image is chosen from this library, it can be resized and moved to accommodate the image field within the app itself.

Google:

When this option is selected, it automatically brings up an Internet image search using the title that has been selected for the image as the default search term. This enables the potential to find a detailed and specific image for use within a schedule. To use an image obtained in the Internet Search function, tap the image thumbnail, which will bring up a larger version of the image. To view the image in full view, tap the “Full View” option located above and to the right of the image itself. In full view, there should be a “Use Image” icon in the bottom center of the screen. If there is no “Use Image” icon, the image is copyrighted and cannot be used.

Camera:

This option allows for images to be taken immediately using the device's built in camera. Once the image has been captured, there is an option to move and scale/resize the image. To use the image, tap the blue "Use" icon in the lower right corner of the screen, and the image will automatically insert into the "Add Photo" field.

Download Package:

In order to provide a larger library of available stock images for use, First Then HD has a feature that allows for "packages" of images to be downloaded to the stock images, which can be used as appropriate. There are over 20 different packages, listed by category for easy navigation. Once a package has successfully been downloaded to your device, it will be highlighted in white, allowing the user to know which photo packages are currently within the stock photo library. To access a package, simply tap the name of the package (a message will appear asking if you want to download the package you selected), click "OK," and the downloading process will begin. When finished, the images will be extracted, and the screen will revert to the Stock Photo library. The images can then be easily accessed and searched for within the library.
